dymemo

External memory for AI

Helping AI remember what matters as information changes.

The opportunity

AI memory must keep up with changing information.

TARGET CUSTOMER

Teams building AI assistants.

EXISTING METHODS

Zep and **Cognee** use networks of connected facts to store and retrieve AI memory.

OUR APPROACH

We aim to maintain these connections with dynamic graph algorithms, reducing repeated work as facts change.

Goal: cheaper updates and faster search, with answer quality preserved.

The team

Yonggang Jiang

AI researcher & algorithms expert

ETH Zurich

Google PhD Fellow 2025

TCS-prover lead

NeurIPS 2026 Meta-Agents Workshop

Zihang Wu

Dynamic graph algorithms expert

Max Planck Institute for Informatics (MPI-INF)

During the Lab

Talk to companies and investors;
find one costly memory bottleneck.

Demonstrate an optimization.

Find a pilot partner.

BUSINESS MODEL TO TEST

**Memory API,
priced by usage.**
